

# WS Ruffer Total Return Fund

SHARE PRICE PERFORMANCE SINCE LAUNCH ON 27 SEPTEMBER 2000

The fund fell back marginally over the month as equity markets continued to move higher, albeit in increasingly narrow fashion. The S&P 500 was up 4% over the last month, whilst the same index equal-weighted was down by 1%, this is illustrative of a world of fewer winners and more losers. There is an adage that when markets are broad, they are strong, but when they are narrow, they are weak.

Over the past nine months we have managed to maintain a level of protection in portfolios we believe will be essential when market conditions deteriorate. But in contrast to the second quarter of last year, the growth assets have contributed to ensure that the fund isn't retreating in the intervening period. This has been driven by proactive portfolio adjustments. Adding duration in the fourth quarter gave us a positive year end; an increased equity weighting and dynamic management of the portfolio's commodity exposure have supported returns this year.

There is something of a dichotomy at play in markets; many investors express concerns but these are not yet reflected in their positioning. In a recent Bank of America Fund Manager survey 69% of respondents consider the 'Magnificent 7' to be the most crowded trade in markets, meanwhile about half of those respondents expect large-cap US growth stocks (dominated by the same seven names) to lead the market higher. There is no telling how much crossover there was from individual respondents, but it indicates a market displaying both uncertainty and great confidence in a benign outcome, given the level of valuations. This is a potentially dangerous combination, particularly when positioning is increasingly extreme in nature (and when leverage is involved).

Our predominant contention in the short term is that investor positioning is yet to adjust to reflect higher risk-free rates. Investors are currently paid more than 5% to not take risk. Meanwhile, risk premiums (the additional return an investor should receive for coming out of cash) are low, particularly in the US. It might be the case that conditions remain benign, but the potential upside of that outcome is limited. This informs our continued focus on ensuring that the portfolio is well positioned to make money should the certainties break and take advantage of the opportunities any sell-off presents.

The yen remains a key protection; we see many reasons for the yen to strengthen, but key to its role in the portfolio is that if the yen is strengthening it is likely to be against a backdrop of financial stress. Credit spreads give us exposure should the current compressed nature of risk premiums reverse. If liquidity is less readily available, a significant re-pricing of corporate debt is likely. We must also remain conscious of the need to participate should the current benign environment persist; the combination of a 25% allocation to equities, a recently increased position in oil plus exposure to gold mining equities, should allow us to participate, but without compromising our capital preservation mandate.

One to twelve month performance figures are cumulative, all others are annualised. Source: Ruffer LLP, Bloomberg. The comparator benchmark shown in this document is as stated in the fund's prospectus. I acc share class performance includes data calculated prior to the inception date, 3 November 2004, based upon a simulated/extended track record using the track record of WS Ruffer Total Return Fund O acc. Ruffer performance is shown after deduction of all fees and management charges, and on the basis of income being reinvested. Past performance is not a guide to future performance. The value of the shares and the income from them can go down as well as up and you may not get back the full amount originally invested. The value of overseas investments will be influenced by the rate of exchange.

## INVESTMENT OBJECTIVE

To seek to achieve positive returns in all market conditions over any 12 month period, after all costs and charges have been taken. Underlying this objective is a fundamental philosophy of capital preservation. Capital invested is at risk and there is no guarantee that a positive return will be delivered over any 12 month period.

## FUND TEAM

**Steve Russell**  
FUND MANAGER

Graduated from the University of Oxford in PPE and started work as an equity analyst at Confederation Life in 1987, progressing to Head of Equities. In 1999 he moved to HSBC Investment Bank as Head of UK and European Equity Strategy, before joining Ruffer in 2003. He is co-manager of two of Ruffer's flagship funds.

**Matt Smith**  
FUND MANAGER

Joined Ruffer in 2011 after graduating from the University of Edinburgh with a first class honours degree in history and German, and is a fellow of the CISI. He co-manages two of Ruffer's flagship funds.

**Alexander Chartres**  
FUND MANAGER

Joined Ruffer in 2010 after graduating from Newcastle University with a first class honours degree in history and politics. He is a Fellow of the CISI and co-manager of two of Ruffer's flagship funds.

## GLOSSARY

**Volatility** measures the extent to which returns vary over a given period. High volatility means returns have been more variable over time

**Duration** measures the sensitivity of a bond or fixed income portfolio's price to changes in interest rates. The higher the duration, the more sensitive the price or portfolio is to changes in interest rates

**UK Bank Rate** the rate the Bank of England charges banks and financial institutions for loans with a maturity of one day

**Sharpe ratio** measures the performance of an investment, adjusting for the amount of risk taken (compared to risk-free). The higher the ratio, the better the returns compared to the risk taken

**Sortino ratio** measures the extra return an investment makes for each unit of bad risk (the chance of losing money below a certain target)
